RACE NORDIC

ENGLISH

atomic.com

BORN ON THE RACE COURSE.

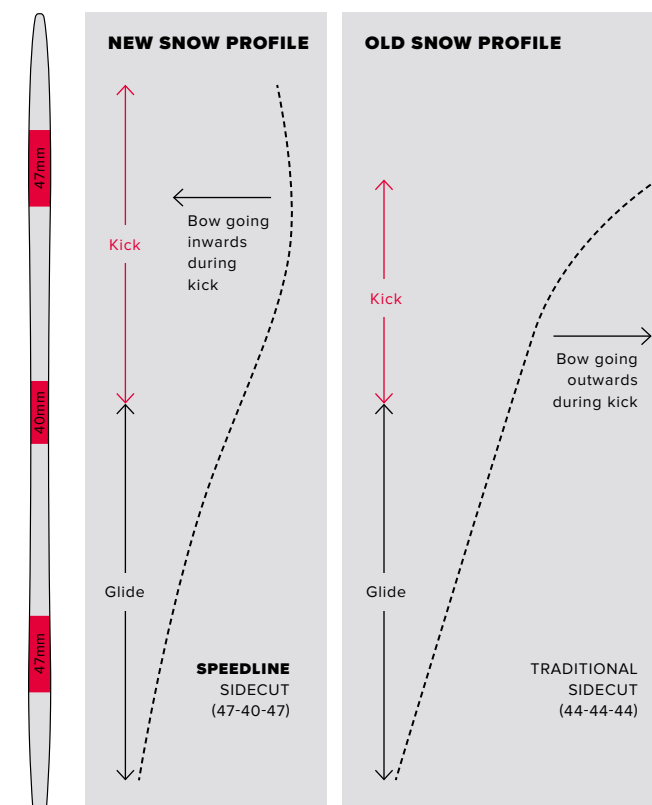

Redster skating skis are designed for maximum performance on the track, and represent the pinnacle of skating ski evolution. Featuring the same Atomic innovations used by the world's top skiers, the Redster S9 Gen S ski offers supreme stride efficiency thanks to a totally redesigned shape, as well as increased control and agility through its shorter body. Together with a new sidewall that eliminates friction in the glide stage, Redster Gen S technology will revolutionize your cross-country experience — from the skate track to the race course.

REDSTER GEN S

Redster Gen S will revolutionize your cross-country experience from the skate track to the race course.

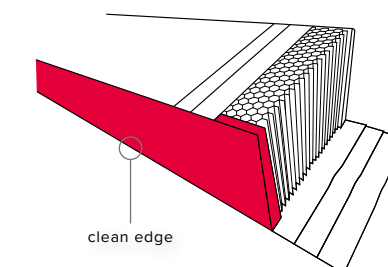

SPEEDLINE

Speedline is our new deeper sidecut with a wider tip and tail (47-40-47mm). In the illustration below you can see the difference. The dashed line is the trace the ski leaves in the snow after each step: Speedline makes this trace curve inwards during the kick and keeps the ski moving forwards for longer (left). The result is a more powerful kick and longer stride, which in turn leads to better stability and a big boost to skiing efficiency.

RACEWALL

Racewall, our new sidewall construction, removes the barrier between ski edge and snow, meaning more direct power transmission, more stability, and faster skiing.

SPEEDSCALE

With the new Speedscale geometry we're offering one unique ski length that eliminates the need for multiple skating ski sizes, while boosting precision, agility and maneuverability.

ATOMIC PRO CENTER

ATOMIC PRO CENTER SKI SELECTION

Retailers can now offer the ultimate personalized skis for customers: visit the Atomic Pro Center and choose from the exact same skis as our world-cup athletes, supported by the exact same service team. Select skis to fit an individual customer's profile and get them grinded for their intended snow conditions. Or if you can't come to our Pro Centre in person, our team will find the perfect match on your behalf.

REDSTER

REDSTER S9 GEN S

Energy-saving efficiency

With a wider tip and tail from the Speedline sidecut, you'll get a stronger push — which means longer strides, improved steering ability, and a big boost to skiing efficiency.

One size, superior agility

Thanks to Redster Gen S technology, we've eliminated the need for varying sizes of skating skis. This innovative combination of new materials, our new Speedline sidecut, and the new Speedscale geometry offers increased precision, agility, and maneuverability on the track.

Race-winning acceleration

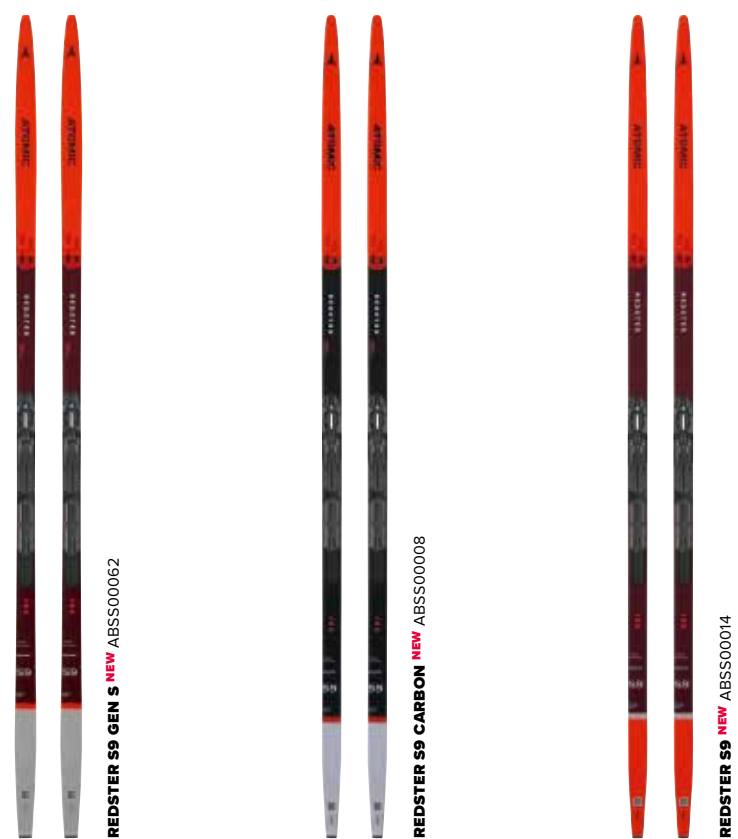

Speed is everything when fractions of a second count. Racewall — our new sidewall construction — generates an even closer connection between ski edge and snow, meaning more direct power transmission, more stability, and faster skiing.

HOW TO SELECT THE PERFECT SKI

CLASSIC

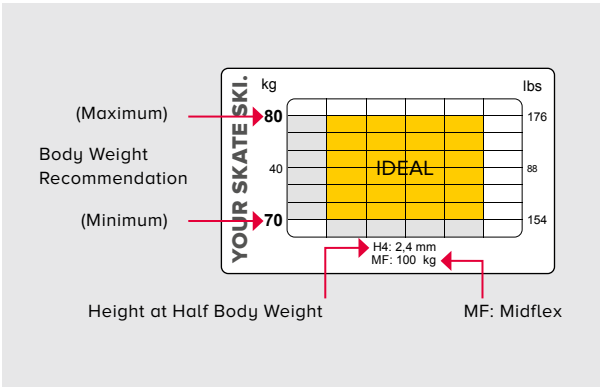

This sticker includes a color coding for different conditions: cold (blue ■), universal (yellow ■) or warm (red ■).

The sticker shown is for a cold ski which is recommended for skiers between 72 – 94 kg (159 – 207 lbs), perfectly suitable for 80 – 90 kg (176 – 198 lbs). In addition, there’s a special sticker for Skintec (color coding grey ■).

SKATE

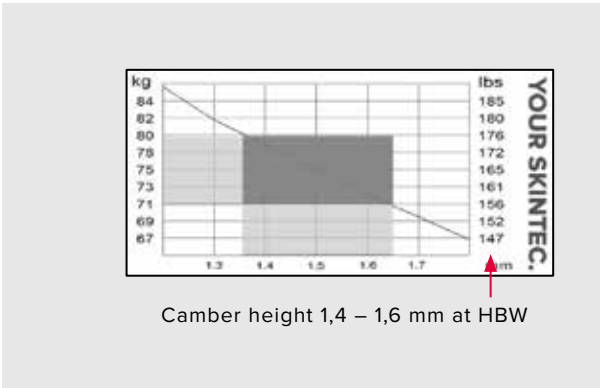

The sticker shown below is for a ski which is recommended for skiers between 70 – 80 kg (154 – 176 lbs).

CLASSIC SKINTEC SKI

Two values help you select your perfect classic Skintec skis for optimized performance:

- BODY WEIGHT:** The body weight will determine which ski you should choose. See the weight recommendation on the ski sticker and choose the ski with your weight corridor.
- CAMBER HEIGHT:** The camber height is the space between the snow and the ski at half body weight. For the perfect kick and glide properties a certain camber height is needed. See the recommended camber height values for the different ski versions below.

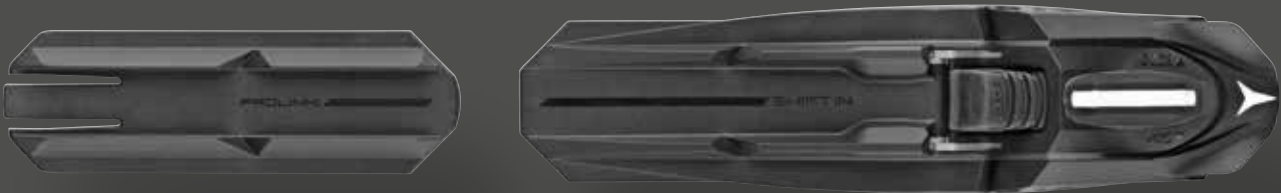

GRINDING FOR DIFFERENT TEMPERATURES AND SNOW CONDITIONS

COLD					
STRUCTURE	CL	SK	WHITE BASE	SNOW TEMP	RANGE OF USE
ATOMIC COLD AC3	+	+		–17° to –8°	cold and dry snow
UNIVERSAL					
STRUCTURE	CL	SK	WHITE BASE	SNOW TEMP	RANGE OF USE
ATOMIC MED AM 6	o	+	CL + SK	–8° to –1°	universal to warm transformed snow
ATOMIC MED AM 7	+	+		–10° to –4°	universal to cold new snow !!! classic even colder !!!
WARM					
STRUCTURE	CL	SK	WHITE BASE	SNOW TEMP	RANGE OF USE
ATOMIC WET AM 7	+	+	CL	–2° to 0°	wet coarse-grained snow (spring snow) !!! + manual structure!!!
ATOMIC WET AM 4	+	+	CL + SK	0°	"NEW Structure" – wet snow / sugar snow

+ = very good option / o = possible option

PROLINK SHIFT-IN

Shift while you’re in

The new Shift-In button means you can adjust your position while you’re still in the binding. In another major improvement the button is integrated into the lever, for a remarkable improvement in swing weight and perfectly balanced skis.

Perfect your performance

Forwards for more grip. Backwards for better glide. Adapt your binding position to suit your terrain, snow and skiing level, and fine-tune during your session.

Bonded for ultimate power

For the first time the Shift-In plate is bonded to the ski, which results in the best power transmission and stability possible. Get the maximum performance from the power you put in.
